Source: Agency for Healthcare Research and Quality (AHRQ) Quality Indicators and SAS, Version 2024, and HCAI hospital patient discharge data, 2023. See Technical Note for details about methodology.

*Statewide rate is an observed rate, not a risk-adjusted rate.

**Hospital name changed from 2022 to 2023, see Technical Note for details.

Note: Blank cells indicate an average rating of a hospital that is not significantly different from the statewide average rate.

Definition of Terms: Risk Adjustment: The Risk-adjusted Rates presented here adjust the observed postoperative sepsis rates. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of postoperative sepsis to 'level the playing field' and allow fair comparisons across hospitals.

Quality Ratings are risk-adjusted using age, gender, diagnosis, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate ('Above Average') or lower 95% confidence level of the risk-adjusted rate is higher than the statewide rate ('Below Average').

Source: Agency for Healthcare Research and Quality (AHRQ) Quality Indicators and SAS, Version 2024, and HCAI hospital patient discharge data, 2023. See Technical Note for details about methodology.

*Statewide rate is an observed rate, not a risk-adjusted rate.

**Hospital name changed from 2022 to 2023, see Technical Note for details.

Note: Blank cells indicate an average rating of a hospital that is not significantly different from the statewide average rate.

Definition of Terms: Risk Adjustment: The Risk-adjusted Rates presented here adjust the observed postoperative sepsis rates. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of postoperative sepsis to 'level the playing field' and allow fair comparisons across hospitals.

Quality Ratings are risk-adjusted using age, gender, diagnosis, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate ('Above Average') or lower 95% confidence level of the risk-adjusted rate is higher than the statewide rate ('Below Average').

AHRQ Postoperative Sepsis Outcomes for Elective Surgeries in California Hospitals, 2023

County	Hospital Name	Postoperative Sepsis Cases	Elective Surgical Discharges	Risk-adjusted Rate (%)	Hospital Performance Rating
		1,038	217,922	0.48*	
Ventura (continued)	Los Robles Hospital & Medical Center	1	1464	0.09	
	St. John's Hospital Camarillo	0	99	0.00	
	St. John's Regional Medical Center	2	645	0.30	
	Ventura County Medical Center	0	7	0.00
