Source: Agency for Healthcare Research and Quality (AHRQ) Quality Indicators and SAS, Version 2023, and HCAI hospital patient discharge data, 2022. See Technical Note for details about methodology.

*Statewide rate is an observed rate, not a risk-adjusted rate.

**Hospital name changed from 2021 to 2022, see Technical Note for details.

Note: Blank cells indicate an average rating of a hospital that is not significantly different from the statewide average rate.

Definition of Terms: Risk Adjustment: The Risk-adjusted Rates presented here adjust the observed postoperative sepsis rates. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of postoperative sepsis to 'level the playing field' and allow fair comparisons across hospitals.

Quality Ratings are risk-adjusted for age, gender, diagnoses, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate ('Above Average') or lower 95% confidence level of the risk-adjusted rate falls above the statewide rate ('Below Average').

Source: Agency for Healthcare Research and Quality (AHRQ) Quality Indicators and SAS, Version 2023, and HCAI hospital patient discharge data, 2022. See Technical Note for details about methodology.

*Statewide rate is an observed rate, not a risk-adjusted rate.

**Hospital name changed from 2021 to 2022, see Technical Note for details.

Note: Blank cells indicate an average rating of a hospital that is not significantly different from the statewide average rate.

Definition of Terms: Risk Adjustment: The Risk-adjusted Rates presented here adjust the observed postoperative sepsis rates. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of postoperative sepsis to 'level the playing field' and allow fair comparisons across hospitals.

Quality Ratings are risk-adjusted for age, gender, diagnoses, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate ('Above Average') or lower 95% confidence level of the risk-adjusted rate falls above the statewide rate ('Below Average').

AHRQ Postoperative Sepsis Outcomes for Elective Surgeries in California Hospitals, 2022

County	Hospital Name	Postoperative Sepsis Cases	Elective Surgical Discharges	Risk-adjusted Rate (%)	Hospital Performance Rating
		1,034	217,046	0.48*	N/A
Tulare (continued)	Sierra View Medical Center	0	108	0.00
