**Hospital name changed from 2022 to 2023, see Technical Note for details

Note: Statewide rates are observed, not risk-adjusted rates. Blank cells indicate that fewer than three cases were reported

Definition of Terms: Risk Adjustment: The Risk Adjusted Rates presented here adjust the observed rates of conditions. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of developing certain medical conditions to 'level the playing field' and allow fair comparisons across hospitals. Total events: number of patients with reported conditions developed. Total Cases: number of patients treated in this hospital.

Quality Ratings are risk-adjusted using age, gender, diagnoses, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate (Above Average) or lower 95% confidence level of the risk-adjusted rate is higher than the statewide rate (Below Average). Cells with no quality ratings indicate a hospital's performance is considered 'not significantly different' from the statewide average.

Note: Statewide rates are observed, not risk-adjusted rates. Blank cells indicate that fewer than three cases were reported

Definition of Terms: Risk Adjustment: The Risk Adjusted Rates presented here adjust the observed rates of conditions. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of developing certain medical conditions to 'level the playing field' and allow fair comparisons across hospitals. Total events: number of patients with reported conditions developed. Total Cases: number of patients treated in this hospital.

Quality Ratings are risk-adjusted using age, gender, diagnoses, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate (Above Average) or lower 95% confidence level of the risk-adjusted rate is higher than the statewide rate (Below Average). Cells with no quality ratings indicate a hospital's performance is considered 'not significantly different' from the statewide average.

Note: Statewide rates are observed, not risk-adjusted rates. Blank cells indicate that fewer than three cases were reported

Definition of Terms: Risk Adjustment: The Risk Adjusted Rates presented here adjust the observed rates of conditions. This statistical methodology takes into account pre-existing health conditions that put some patients at greater risk of developing certain medical conditions to 'level the playing field' and allow fair comparisons across hospitals. Total events: number of patients with reported conditions developed. Total Cases: number of patients treated in this hospital.

Quality Ratings are risk-adjusted using age, gender, diagnoses, comorbidities, and medical procedures. Above Average or Below Average are noted when upper 95% confidence level of the risk-adjusted rate falls below the statewide rate (Above Average) or lower 95% confidence level of the risk-adjusted rate is higher than the statewide rate (Below Average). Cells with no quality ratings indicate a hospital's performance is considered 'not significantly different' from the statewide average.
