

## Health Care Affordability Board Meeting

February 28, 2024

## Welcome, Call to Order, and Roll Call

#### Agenda

1. Welcome, Call to Order, and Roll Call Secretary Mark Ghaly, Chair

#### 2. Executive Updates

Elizabeth Landsberg, Director, and Vishaal Pegany, Deputy Director

#### 3. Action Consent Items

Vishaal Pegany

a) Approval of the January 24, 2024 Meeting Minutes

#### 4. Informational Items

- a) Spending Target Methodology and Value including Advisory Committee Feedback and Assessing Performance Against the Statewide Spending Target
  - Vishaal Pegany, CJ Howard, Assistant Deputy Director, Andrew Feher, Manager of Research and Analysis, and Michael Bailit, Bailit Health
- b) Examples of Cost-Reducing Strategies Employed by MemorialCare Margareta Brandt, Assistant Deputy Director
- c) Alternative Payment Model Standards and Adoption Goal *Margareta Brandt*
- d) Measuring Consumer Affordability
  Vishaal Pegany, and Miranda Dietz, Policy Research Specialist and Project Director for CalSIM, and Laurel Lucia, Director of the Health
  Care Program, UC Berkeley Labor Center
- e) Measuring Out-of-Plan Spend Vishaal Pegany, CJ Howard, and KeriAnn La Spina, Senior Health Researcher, Mathematica
- 5. Public Comment
- 6. Adjournment

#### **Executive Updates**

Elizabeth Landsberg, Director Vishaal Pegany, Deputy Director

#### **Black Liberation Statement**

At HCAI, we acknowledge the devasting and longstanding impacts racism, oppression, and white supremacy has had on Black and African American communities. We also believe it is critical to acknowledge that Black communities have been treated inhumanely by the U.S. government through enslavement, segregation, mass incarceration and exploitation through medical experimentation used to advance medicine resulting in longstanding inequities. To begin to rectify these wrongs, there must be an explicitly anti-racist approach to reduce racial disparities in health care and more broadly.

At HCAI, we envision a health care system where doctors listen to their Black patients, center their experiences, and take proactive steps to counter implicit bias resulting in quality care and improved patient outcomes. In solidarity and allyship with California's Black communities, HCAI centers and amplifies the voices of our Black partners, leaders, colleagues, and community members. We uplift Black resilience, education, and health. We fully commit to revisiting HCAI's programs, policies, and procedures to ensure state resources are distributed equitably in a manner that recognizes our responsibility to address disparities impacting Black communities.

#### **Senate Confirmation of Board Members**

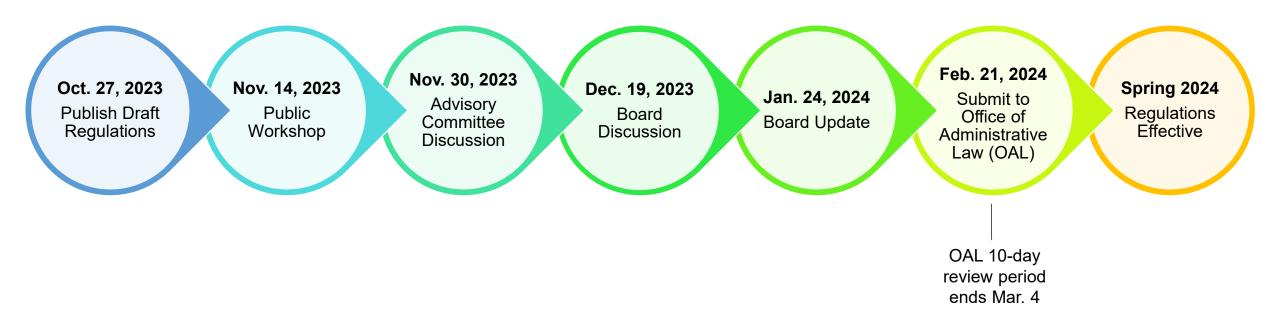

The California Senate recently confirmed Governor Newsom's four Health Care Affordability Board appointees.

- Elizabeth Mitchell
- Sandra Hernández
- David Carlisle
- Richard Kronick

# Update on Total Health Care Expenditures (THCE) Proposed Regulations and Data Submission Guide

#### **THCE Rulemaking Timeline**

#### Slide Formatting

Indicates informational items for the Board and decision items for OHCA

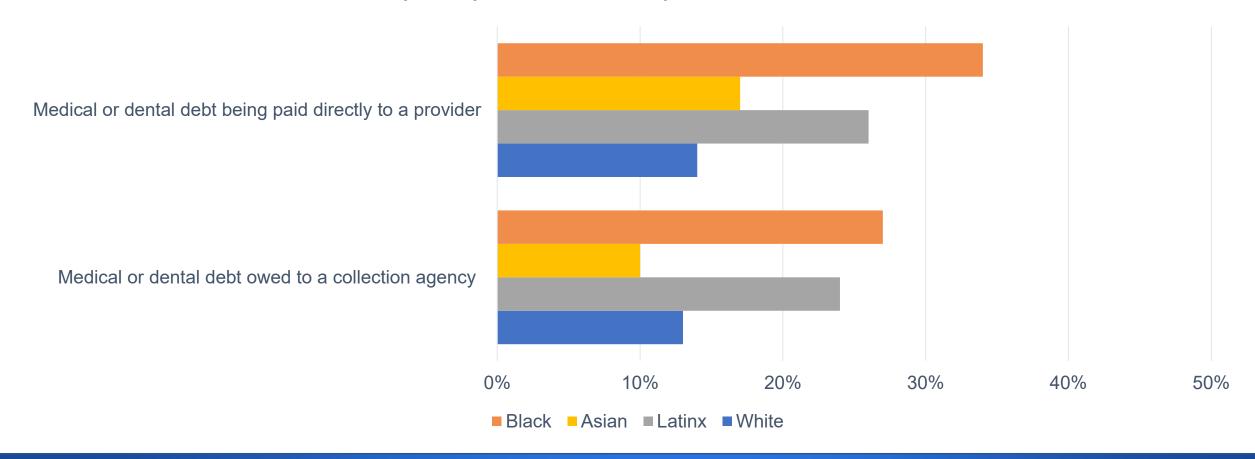

Indicates current or future action items for the Board

## CHCF/NORC California Health Policy Survey

### Black and Latinx Residents Are More Likely to Report Different Types of Medical Debt

% who say they have each type of medical debt

#### **High Costs Contribute to Personal Bankruptcy**

#### **Nationally**

- A 2019 National Institutes of Health survey reported that nearly 60% of respondents cited medical expenses as a contributor to their bankruptcy.
- In 2021, the U.S. Census Bureau found that Americans owe at least \$220 billion of medical debt.
- Some estimate \$140 billion of medical debt is in collections.

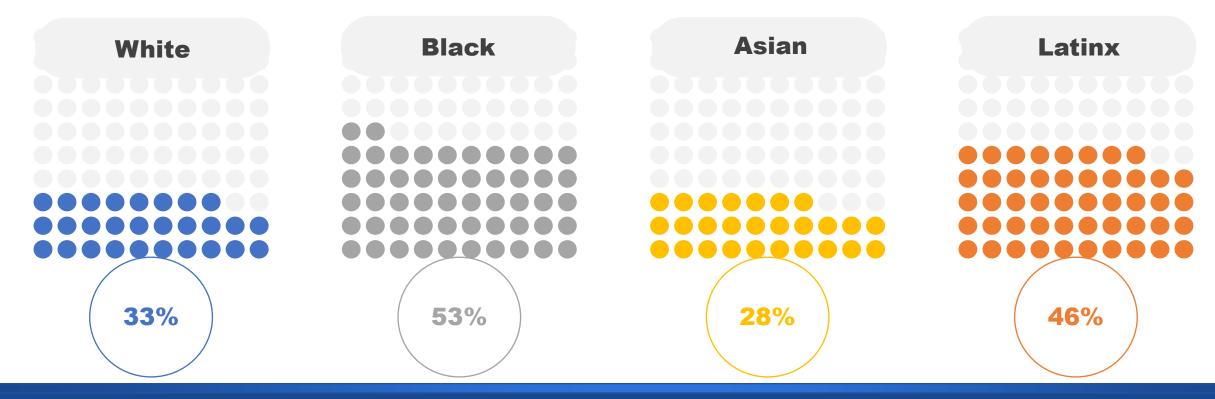

#### **California**

- 38% of Californians report having medical debt.
- 2 in 10 Californians report having trouble paying medical bills.

#### High Costs Contribute to Personal Bankruptcy

Medical debt is more likely to be experienced by communities of color than by white communities.

#### Public Comment

# Action Consent Item: Approval of the January 24, 2024 Board Meeting Minutes

#### Public Comment

#### Informational Items

#### Spending Target Methodology and Value Including Advisory Committee Feedback and Assessing Performance Against the Statewide Spending Target

Vishaal Pegany
CJ Howard, Assistant Deputy Director
Michael Bailit, Bailit Health

# OHCA's Recommendation for the Health Care Spending Target

#### Timeline for Adopting the Spending Target for 2025

January 17, 2024 **OHCA** recommends a

proposed target

January 23, 2024

Advisory Committee discusses proposed target January 24, 2024

Board discusses proposed target

February 28, 2024

**Board Meeting** 

March 11, 2024

Closing of the 45-day comment period from January board meeting

March 11, 2024-June 1, 2024

Board adopts final target

## OHCA's Recommendation: Statewide Per Capita Health Care Spending Target

OHCA recommends the adoption of the following statewide per capita health care spending targets for 2025-2029, based on the average annual rate of change in historical median household income over the 20-year period from 2002-2022.

Performance Year	Per Capita Spending Growth Target
2025	3.0%
2026	3.0%
2027	3.0%
2028	3.0%
2029	3.0%

#### Advisory Committee Feedback Related to OHCA's Recommendation for the Health Care Spending Target

Below is a summary of feedback received at the January 23, 2024 Advisory Committee meeting regarding OHCA's recommended spending target:

Some members had comments/concerns with OHCA's recommendation to tie the spending target to historical median household income growth over the 20-year period (2002-2022), such as:

- The timeframe includes the great recession and near-zero interest rates; it's not representative of today or the future. Additionally, the population is aging.
- The timeframe doesn't account for inflation or other cost trends for uncontrollable expenses, including legislative/regulatory mandates. Access could be compromised.
- Using a different timeframe of 2013 to 2022, median household income grew by 4.1 percent.
- 20-year historical household income with low inflation has nothing to do with future medical costs. Targets must be believable and should not reduce access to care.
- Applying adjustments to historical household income growth to account for medical cost inflation and the new minimum wage law, costs will go up.
- Concerns about access to care and demands on the system, especially with CalAIM, an aging population, and higher acuity patients.

Other members were supportive of the 3% recommendation and tying it to the consumer experience and median household income. Comments are summarized below:

- Couldn't imagine a target being any higher than 3% as health care is currently unaffordable and impacting access as people skip care.
- Agree with 3% with no adjustments. There's already system gaming (rates increasing now in anticipation of a target); even 3% won't address the problem (e.g., Monterey).
- Health care is even more expensive for rural families -- keep a human impact perspective.
- Under OHCA's recommendation, at least health care costs wouldn't outgrow wages and income. It also aligns with Oregon and Washington (West coast states with targets).
- Three percent is the least we can do (with no population adjustments)—it won't make health care more affordable but may keep it from becoming more unaffordable.
- Higher wages (due to the health care worker minimum wage law or labor contracts) do not automatically
  mean costs will go up proportionately. Higher wages could mean more productivity, less turnover, and
  lower recruiting costs resulting in better care so patients are healthier, driving costs down.

Some members had concerns with the 5-year statewide target timeframe and encouraged getting to sector-specific targets as soon as possible. Comments included that:

- Different entities are starting from different places Bay Area vs Central Valley, sector and regional diversity.
- Costs are skyrocketing due to failures (e.g., network adequacy leading to delayed care; high-cost drugs leading to medication noncompliance, comorbidities, etc.). Costs may not be realized where they were created. Don't make the job harder/reduce costs by restricting tools providers have access to because of outside forces.
- It doesn't make sense to assess the same target to a high-cost provider vs a low-cost provider;
   early sector targets would help with credibility.

Members had differing opinions/comments regarding adjusting the future cost target based on trends in the price of health care technologies, including:

- It's hard to quantify what any adjustment might be maybe discuss in real time as new technologies are introduced?
- Consider adjusting down as well (e.g., more effective drugs should reduce costs/improve outcomes; electronic medical records and Al should increase productivity).
- Some technology components have known costs (e.g., specialty drugs/devices); look at price trend over the past 5 years and include it in the target calculation (not retrospectively), otherwise plans/providers will limit access to manage costs.
- Retrospective is the right direction. Any technology or new unknown will impact sectors differently. A new drug that increases costs may not impact other parts of the system. Adjusting prospectively will create inequalities in the system--need time for it to play out retro.
- Prospective adjustment is an inappropriate use of pharmaceuticals and would push prices up if cards are shown to Pharma.
- Retrospective sounds like a big carve out/exemption. What's the incentive to manage prospectively if folks get a hall pass on the back end?

#### Board Follow-Up Items

#### Today's Follow-Up Items

During today's Board meeting, we will provide information regarding:

- 1. Changes in per capita health care spending from 2020 to 2021 for states that publicly reported such information
- 2. The differential between historical spending growth and state spending target values
- 3. The extent to which health care spending affects employment-related outcomes

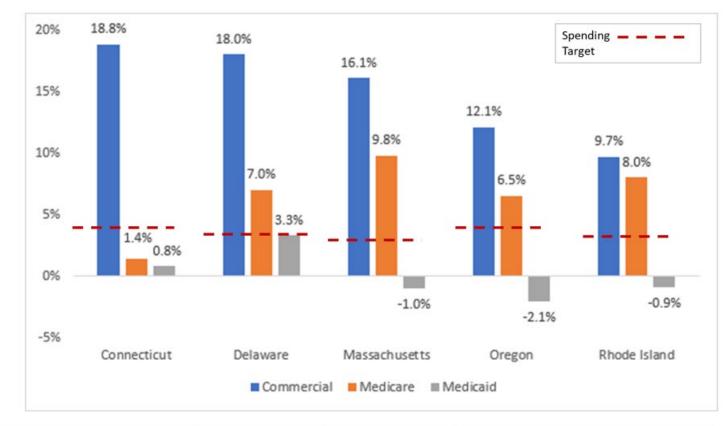

#### Changes In Per Capita Spending from 2020 to 2021

## 2020 to 2021 Health Care Spending Trends Across Spending Target States

In June 2023, Bailit Health authored a *Health Affairs Forefront* blog post, summarizing 2021 health care spending performance relative to spending growth targets in five states.

- All states reported increased health care spending in 2021. This growth was expected since COVID-19 contributed to a sharp decline in utilization in 2020.
- Double-digit growth in commercial spending contributed to overall spending growth in four of the five states. Rhode Island was the exception.

State	Connecticut	Delaware	Massachusetts	Oregon	Rhode Island
Spending Target	3.4%	3.3%	3.1%	3.4%	3.2%

## Differential Between Historical Spending Growth and State Spending Target Values

### Differential Between Historical Spending Growth and Spending Target Values in Other States

- Please note only in 2023 did CMS update its state-level personal health care spending time-series to include 2020. As a result, aside from California, states with spending target programs only had access to CMS's state-level historical personal health care spending data through 2014.
- States' *initial* target values ranged from between 1.3 to 2.2 percentage points of the 20-year average spending growth rate and *latest* target values between 1.4 to 2.6 percentage points of the 20-year average growth rate.
- Because most states reduced their spending target percentage over time (e.g., from 3.4% down to 3.0% in Oregon), the differences between average spending growth and the *latest* target values increase over time.

### Differential Between Historical Spending Growth and Spending Target Values in Other States

State	Target Value	20-year Average Growth (1994-2014)	Difference in percentage points from <i>initial</i> target	Difference in percentage points from <i>latest</i> target
Connecticut	3.4% 2021 3.2% 2022 2.9% 2023-2025	4.8%	1.4	1.9
Delaware	3.8% 2019 3.5% 2020 3.25% 2021 3.0% 2022-2023	5.6%	1.8	2.6
Massachusetts	3.6% 2013-2017	5.0%	1.4	1.4
Oregon	3.4% 2021-2025 3.0% 2026-2030	5.6%	2.2	2.6
Rhode Island	3.2% 2019-2022	5.3%	2.1	2.1
Washington	3.2% 2022-2023 3.0% 2024-2025 2.8% 2026	5.1%	1.9	2.3
New Jersey	3.5% 2023 3.2% 2024 3.0% 2025 2.8% 2026-2027	4.8%	1.3	2.0
California	3.0% 2025-2029 (proposed)	4.7%	1.7	1.7
California	3.0% 2025-2029 (proposed)	5.4% (2000-2020)	2.4 (2000-2020)	2.4 (2000-2020)

#### Effects of Health Care Spending on Employmentrelated Outcomes

### What Are the Effects of Health Care Spending on Employment-Related Outcomes?

**Approach**: Systematic review of three databases: National Bureau of Economic Research (NBER), JAMA and PubMed.

- We screened 1,092 titles and abstracts: NBER (n=881), JAMA (n=8) and PubMed (n=203).
- To be included, studies had to be empirical evaluations, U.S.-based and published between 2004 and 2024. We excluded editorials, commentaries or articles focused on theory.
- Used the following search terms: "health care spending" AND ("wages" OR "labor" OR "employ" OR "earnings" OR "income" OR "compensation")
- Of the 1,092 titles and abstracts screened, we included 15 articles that directly addressed the policy question of interest. The articles broadly fell into two categories: (1) the effects of premiums and spending on employment-related outcomes and (2) the effects of adverse health events which increase spending on employment-related outcomes.

**Limitations:** Does not capture unpublished research or research published outside of the typical commercial or academic publishing environment.

## **Key Findings: Effects of Premiums and Spending**

Among the studies we identified, high and rising health insurance premiums were associated with the following:

- reduced probability of employment
- reduced hours worked
- increased likelihood of part-time employment
- lower wages, incomes and total compensation (affects women more than men).
- reductions in benefits (e.g., dental, retirement)
- greater employee cost-sharing through less generous coverage
- higher rates of unemployment in non-health care sectors and corresponding increases in mortality from overdoses and suicides

# **Key Findings: Effects of Adverse Health Events**

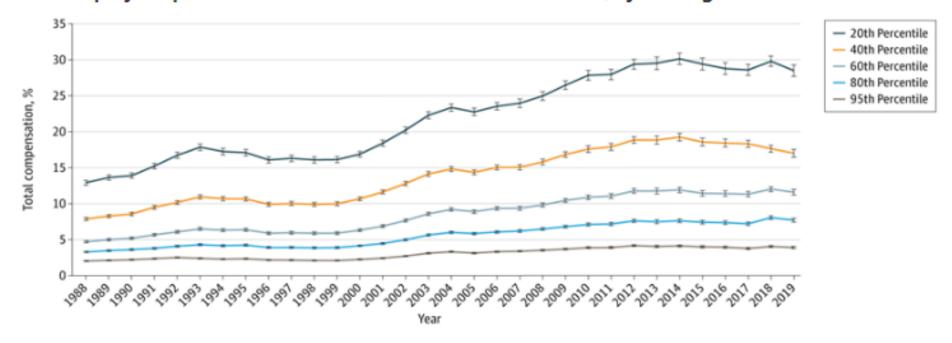

Among the studies we identified, adverse health events (e.g., cancer diagnoses, disability onset, hospitalizations) were associated with the following:

- increased likelihood of disability
- decreased likelihood of employment with spillovers to caregivers
- increased out-of-pocket medical spending
- unpaid medical bills
- higher rates of bankruptcy
- reduced earnings and income

# **Employer-Sponsored Insurance Premium Growth and Earnings Inequality**

A recent article published in JAMA Health Forum found that, between 1988 and 2019, employer-sponsored health insurance premiums as a share of compensation increased from an average of 7.9% up to 17.7%, with more pronounced effects for lower-income families.

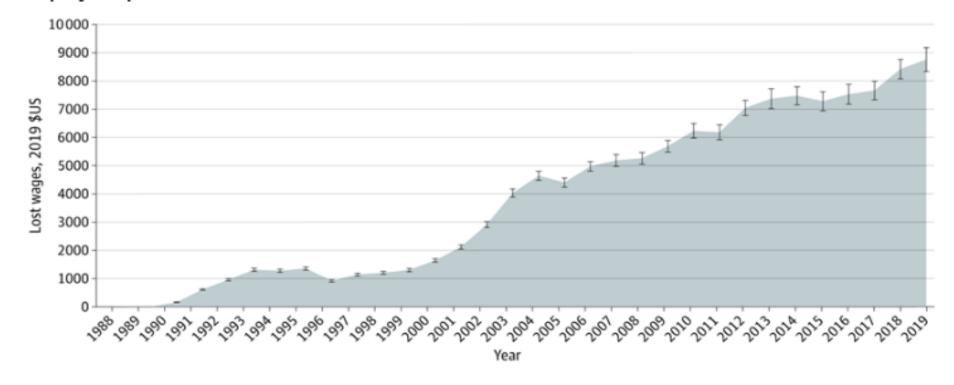

Figure 2. Percentage of Compensation Associated With Health Care Premiums Among Families With Employer-Sponsored Health Insurance From 1988 to 2019, by Earnings Percentile

# **Employer-Sponsored Insurance Premium Growth and Earnings Inequality**

In addition, the authors estimate cumulative average lost earnings of approximately \$125,000 from 1988-2019, compared to an alternative where premium costs would have remained fixed as a percentage of employee compensation at 1988 levels.

Figure 3. Lost Wages Associated With Health Care Premium Increases Among Families With Employer-Sponsored Health Insurance From 1988 to 2019

# Assessing Performance Against the Statewide Spending Target

# Elements of Spending Target(s) Implementation

- 1. Set Statewide Spending Target
- On or before June 1, 2024, the board must establish a statewide spending target for 2025.
- Target setting methodology discussions have been rooted in consumer affordability.
- A statewide target cannot uniformly account for circumstances impacting each entity's performance against the target.

# 2. Assess Entity Performance Against the Statewide Spending Target

- The office will assess each entity's performance against the target.
- The office will consider circumstances that may have impacted performance.

### 3. Progressive Enforcement

- Technical Assistance
- Public Testimony
- Performance Improvement Plans
- Financial Penalties

# **Authority to Assess Performance Against** the Spending Target

127502.5 (a): "The director shall enforce the cost targets established by this chapter against health care entities in a manner that ensures compliance with targets, allows each health care entity opportunities for remediation, and ensures health care entities do not implement performance improvement plans in ways that are likely to erode access, quality, equity, or workforce stability. The director shall consider each entity's contribution to cost growth in excess of the applicable target and any actions by the entity that have eroded, or are likely to erode, access, quality, equity, or workforce stability, factors that contribute to spending in excess of the applicable target, and the extent to which each entity has control over the applicable components of its cost target. The director shall review information and other relevant data from additional sources, as appropriate, including data from the Health Care Payments Data Program, to determine the appropriate health care entity that may be subject to enforcement actions under this section..."

# **Authority to Assess Performance Against the Spending Target**

127502.5 (a): "...Commensurate with the health care entity's offense or violation, the director may take the following progressive enforcement actions:

- 1) Provide technical assistance to the entity to assist it to come into compliance.
- 2) Require or compel public testimony by the health care entity regarding its failure to comply with the target.
- 3) Require submission and implementation of performance improvement plans, including input from the board.
- 4) Assess administrative penalties in amounts initially commensurate with the failure to meet the targets, and in escalating amounts for repeated or continuing failure to meet the targets."

## **Assessing Performance Against the Target**

- OHCA has heard from the board and the public about potential factors that should be considered when assessing an entity's performance against the target. Such factors may contextualize an entity's spending growth as well as potentially mitigate steps in the progressive enforcement process.
- Some of the potential factors that have been surfaced to OHCA by the Board, Advisory Committee, and stakeholders, as well as described in the statute include:
  - Statutory changes impacting health care costs
  - Investments to improve care and reduce future costs
  - Acts of god or catastrophic events
  - Emerging and unforeseen advances in medical technology
  - Emerging high-cost / high-value pharmaceuticals and cost increases related to specialty pharmaceuticals
  - Costs associated with increased organized labor costs
  - Annual changes in age and sex of the entity's population

# **Assessing Performance Against the Target**

Are there additional reasonable factors that may impact entity performance against the target?

# Public Comment

# Examples of Cost-Reducing Strategies

Vishaal Pegany, Deputy Director

## **Cost-Reducing Strategies Project**

- OHCA is working with health plans, hospitals, and physician organizations to highlight examples of cost-reducing strategies – efforts to reduce cost while improving or maintaining quality – that have demonstrated results.
- To start this project, OHCA spoke with industry associations, quality improvement collaboratives, and others to understand their approach to cost-reducing strategies and seek introductions to health care entities implementing successful strategies.
- OHCA interviewed health care entities across California to identify strategies that reduce overall system costs and are sustainable for the entity to implement and maintain.
- From these interviews, OHCA is working with several organizations to develop a summary of their cost reducing strategy to share through a new HCAI webpage.
- These strategies can be a resource to support health care entities in meeting OHCA's health care spending growth targets.

# Seeking Additional Examples of Cost-Reducing Strategies

**OHCA is seeking additional examples of cost-reducing strategies.** Examples might include a program that addresses a specific population, implementation of best practices for more efficient resource use, or an effort to increase care coordination, etc. OHCA is interested in the following:

- **Description:** Overview of the cost-reducing strategy, what it is, and how it functions. Explain what was implemented, who the population of focus is, who the market is, etc.
- Purpose: Rationale for implementation and the problems it is/was addressing.
- Results: Quantitative and/or qualitative indicators of success that demonstrate how the costreducing strategy reduced cost and improved or maintained quality of care.
- Barriers or challenges: Description of barriers or challenges your organization faced in implementing the strategy and if or how the strategy has evolved over time to address these.

Contact OHCA at <a href="https://ohcai.ca.gov">ohca@hcai.ca.gov</a> if you would like to propose a cost-reducing strategy for consideration.

# MemorialCare Cost-Reducing Strategies

Barry Arbuckle, PhD, President and CEO of MemorialCare

# Cost-Reducing Strategies

Presented to:

Office of Healthcare Affordability
Department of Health Care Access and Information

February 28, 2024

Barry Arbuckle, PhD
President and Chief Executive Officer

## **An Integrated Health System**

- 4 Hospitals: Teaching Hospital, Women's & Children's Hospital, and 2 Community Hospitals
- > 100 Community-based centers including:
  - **24** Imaging centers
  - **32** Physical Therapy clinics
  - 22 Dialysis sites (in-center and home-based)
  - 12 Urgent Care centers
  - **13** Breast centers
  - **9** Ambulatory Surgical Centers
  - 1 Co-located primary & specialty, dental practice site
- ~400 primary care physicians; 1,500+ affiliated specialists
  - A Full Knox-Keene Health Plan
  - **An** Innovation Investment Fund

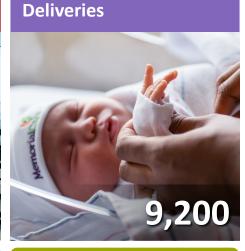

### Each Year We Manage...

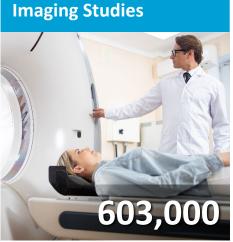

**Dialysis Treatments** 

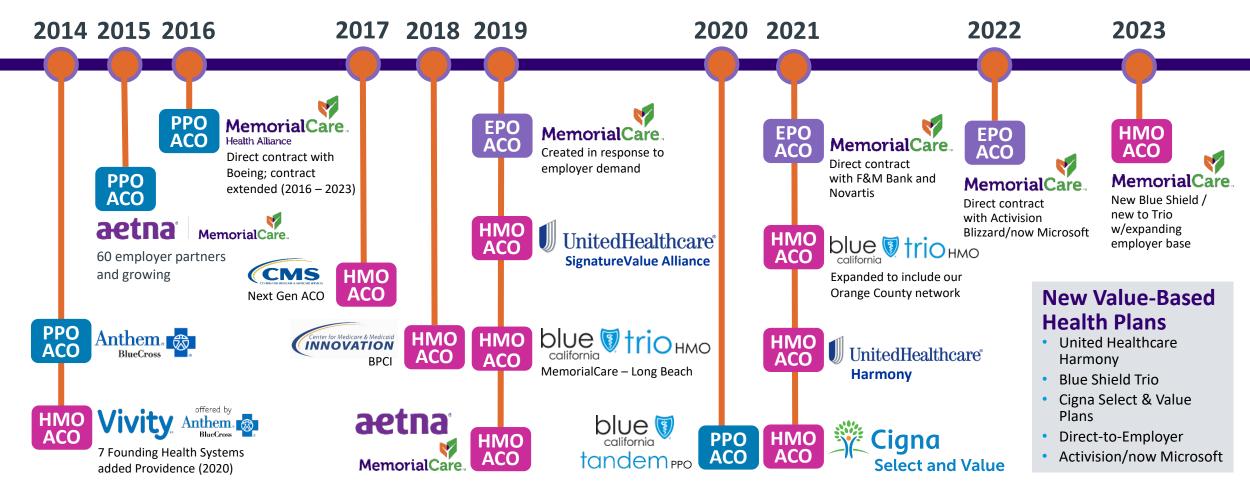

# Value-Based Care Health Plan Partnerships

## Key Ingredients to Success

#### Key Ingredients:

Invest in robust "ACO infrastructure" including:

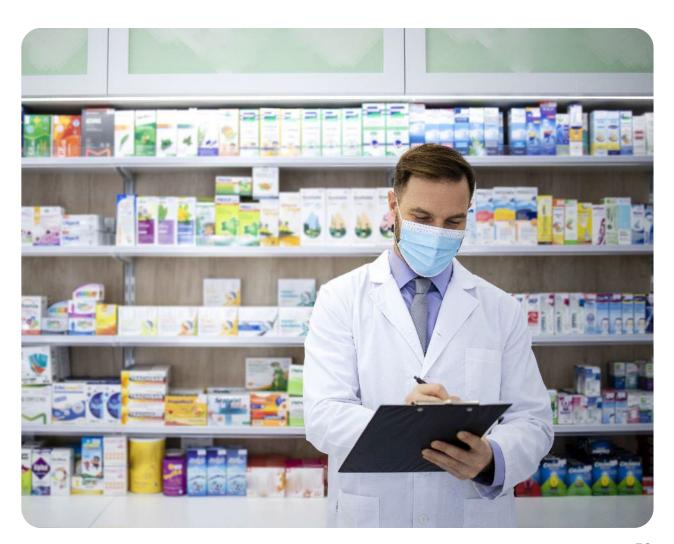

- Data, data, and data
- Care management
- Pharmacy management
- Broad PCP and ambulatory access points
- Behavioral Health

Patient access and engagement vehicles

Standardized metrics for quality and cost containment across ACOs

IDS committed to "real" value

Extensive portfolio of Virtual Care options (e.g., virtual visits, eVisits, virtual behavioral health, eConsults, remote patient monitoring)

# Cost-Reducing Strategies

# Lowering the Total Cost-of-Care through Most Appropriate Site of Care

Outpatient procedures (imaging, surgery, testing, therapies, other) can be done in:

- 1) Hospital Outpatient Departments (HOPD)
- 2) Community-Based Ambulatory Centers
- Cost to payer/employer can vary considerably between HOPDs and community-based ambulatory centers
- Clinical criteria can (does) determine which setting is most appropriate for the patient
- CMS uses a 'blunt instrument' of site neutrality

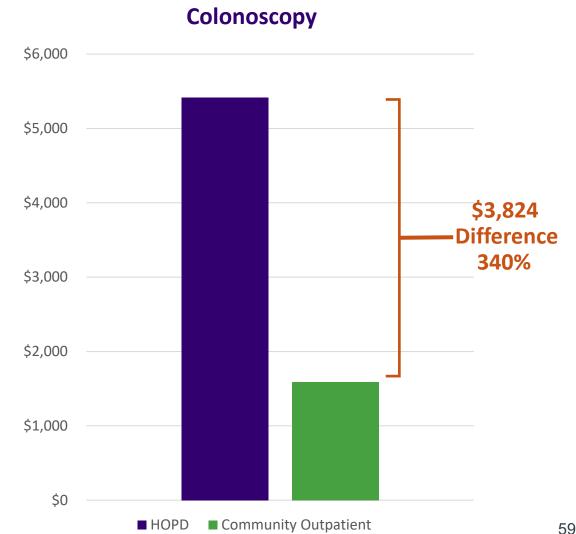

### What is Right for the Patient Determines **Right Site of Care**

### **Clinical Rationale for use of HOPD**

(not all inclusive)

- Patient is moderately to morbidly obese
- Patient has multiple comorbidities
- Patient with certain drug allergies

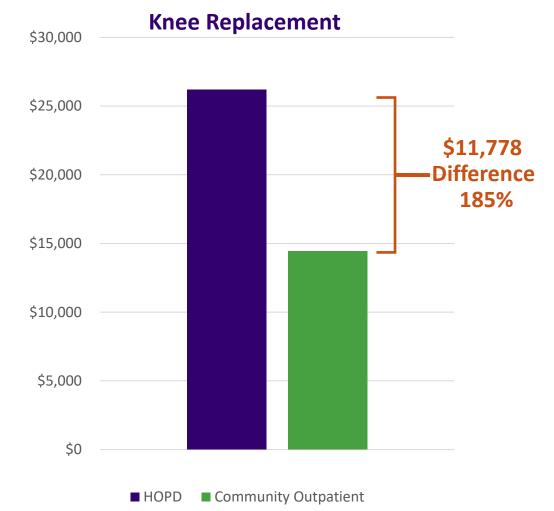

# What is Right for the Patient Determines Right Site of Care

# Clinical Rationale for use of HOPD

(not all inclusive)

- Patient has multiple comorbidities
- Patient has history of difficulty with anesthesia

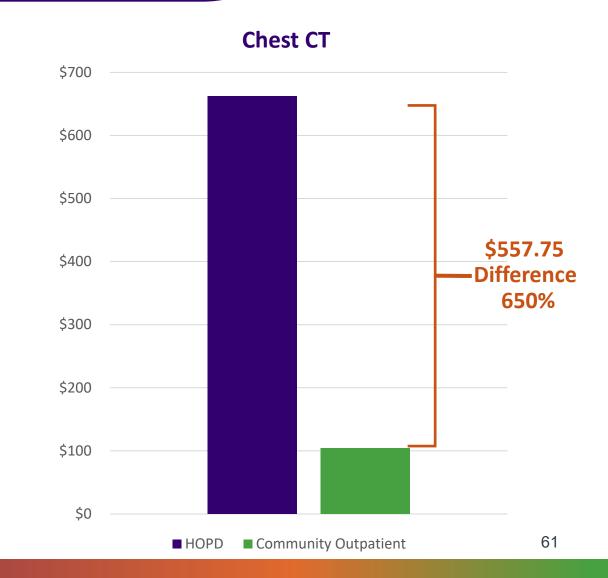

# What is Right for the Patient Determines Right Site of Care

# Clinical Rationale for use of HOPD

(not all inclusive)

- Patient requires obstetrical or perinatal observation
- Patient has known contrast allergy
- Patient is under age 18
- Patient has multiple comorbidities including obesity

## Accounting for the price delta...

- HOPDs are licensed under/operated by hospitals which must be available 24/7/365
- Regulatory and Compliance requirements drive up the cost
  - e.g., Installing/Maintaining the SAME equipment in a hospital environment costs 30%-100% more than at a community site (e.g., an imaging center in a strip mall)
- Patient condition and the resources required to care for them
- Hospitals take all comers
- Specialty physician costs for required coverage are skyrocketing due to physician shortages, more opportunities in the ambulatory sector, etc.

## **Barriers and Challenges**

#### **Hospitals and Health Systems**

- Many have not invested in a robust network of community-based ambulatory sites
- In FFS contracts, the 'value' created by investing in this network accrues to another entity (e.g., health plan)
- Challenges in integrating patient records across sites of care
- Some/many community-based ambulatory sites do not accept certain insurance coverage

#### **Other Challenges**

 Clinical criteria to determine site of care has many gaps (some health plans have no published criteria) and has been slow to evolve

### **A Final Word**

The **Office of Healthcare Affordability** goal of increasing adoption of Alternative Payment Models (APM) where provider reimbursement is at-risk, shifting away from FFS, will accelerate *right site of care* - once a substantial portion of providers' reimbursement is in HCP-LAN Categories 3B, 4A, 4B, or 4C.

Until then, accelerating the establishment/proliferation of clinical criteria published by the health plans will move the dial.

# Public Comment

# Alternative Payment Model Standards and Goal

Margareta Brandt, Assistant Deputy Director, Health System Performance

## Focus Areas for Promoting High Value

#### **Primary Care Investment**

- Define, measure, and report on primary care spending
- Establish a benchmark for primary care spending

#### Behavioral Health Investment

- · Define, measure, and report on behavioral health spending
- Establish a benchmark for behavioral health spending

#### **APM Adoption**

- Define, measure, and report on alternative payment model adoption
- Set standards for APMs to be used during contracting
- Establish a goal for APM adoption

## **Quality and Equity Measurement**

 Develop, adopt, and report performance on a single set of quality and health equity measures

#### **Workforce Stability**

- Develop and adopt standards to advance the stability of the health care workforce
- Monitor and report on workforce stability measures

## **Investment and Payment Workgroup Members**

## Providers & Provider Organizations

#### Bill Barcellona, Esq., MHA

Executive Vice President of Government Affairs, America's Physician Groups

#### Lisa Folberg, MPP

Chief Executive Officer, California Academy of Family Physicians (CAFP)

#### Paula Jamison, MAA

Senior Vice President for Population Health, AltaMed

#### Cindy Keltner, MPA

Vice President of Health Access & Quality, California Primary Care Association (CPCA)

#### Amy Nguyen Howell MD, MBA, FAAFP

Chief of the Office for Provider Advancement (OPA), Optum

#### **Janice Rocco**

Chief of Staff, California Medical Association

#### Adam Solomon, MD, MMM, FACP

Chief Medical Officer, MemorialCare Medical Foundation

#### Academics/ SMEs

#### Sarah Arnquist, MPH

Principal Consultant, SJA Health Solutions

#### Crystal Eubanks, MS-MHSc

Vice President
Care Transformation,
California Quality Collaborative
(CQC)

#### Kevin Grumbach, MD

Professor of Family and Community Medicine, UC San Francisco

#### Reshma Gupta, MD, MSHPM

Chief of Population Health and Accountable Care, UC Davis

#### Kathryn Phillips, MPH

Associate Director, Improving Access, California Health Care Foundation (CHCF)

# State & Private Purchasers

#### Lisa Albers, MD

Assistant Chief, Clinical Policy & Programs Division, CalPERS

#### Palav Babaria, MD

Chief Quality and Medical Officer & Deputy Director of Quality and Population Health Management, California Department of Health Care Services (DHCS)

#### Monica Soni, MD

Chief Medical Officer, Covered California

#### **Dan Southard**

Chief Deputy Director, Department of Managed Health Care (DHMC)

# Consumer Reps & Advocates

#### Beth Capell, PhD

Contract Lobbyist, Health Access California

#### **Nina Graham**

Transplant Recipient and Cancer Survivor, Patients for Primary Care

#### **Cary Sanders, MPP**

Senior Policy Director,
California Pan-Ethnic Health Network
(CPEHN)

## Hospitals & Health Systems

#### Ben Johnson, MPP

Vice President Policy, California Hospital Association (CHA)

#### Sara Martin, MD

Program Faculty, Adventist Health, Ukiah Valley Family Medicine Residency

#### Ash Amarnath, MD, MS-SHCD

Chief Health Officer, California Health Care Safety Net Institute

#### **Health Plans**

Principal Program Manager, Industry Initiatives, Blue Shield of California

#### Rhonda Chabran, LCSW

Director of Behavioral Health Quality & Regulatory Services, Kaiser Foundation Health Plan/Hospital, Southern CA & HI

#### Keenan Freeman, MBA

Chief Financial Officer, Inland Empire Health Plan (IEHP)

#### **Mohit Ghose**

State Affairs, Anthem

## **Key Workgroup Discussion Topics**

#### **Alternative Payment Models**

# Definitions, Measurement, Reporting: Categorizing APMs, unit of reporting, health and social risk adjustment

#### Standards for APM Contracting:

Common requirements/incentives for high quality equitable care, accelerate adoption of APMs

#### **Statewide Goals for Adoption:**

Variation by market (Commercial, Medi-Cal), target timeline, unit of reporting (percent of payments, members, and/or provider contracts)

#### **Primary Care**

### Definitions, Measurement, Reporting:

Primary care providers, services, site of service, non-claims, integrated behavioral health

#### **Investment Benchmark:**

Variation by market (Commercial, Medi-Cal) or population (adult vs. pediatric)

#### **Behavioral Health**

### Definitions, Measurement, Reporting:

Spending on social supports, capturing carved out behavioral health spending

#### **Investment Benchmark:**

Variation by market (Commercial, Medi-Cal) or population (adult vs. pediatric)

## **Alternative Payment Models**

### Statutory Requirements

- Promote the shift of payments based on fee-for-service (FFS) to alternative payment models (APMs) that provide financial incentives for equitable highquality and cost-efficient care.
- Convene health care entities and organize an APM workgroup, set statewide goals for the adoption of APMs, measure the state's progress toward those goals, and adopt contracting standards healthcare entities can use.
- Set benchmarks that include, but are not limited to, increasing the percentage of total health care expenditures delivered through APMs or the percentage of membership covered by an APM.

## **Alternative Payment Models**

### **Statutory Requirements**

- Require payers, fully integrated delivery systems, and restricted and limited health care service plans to submit data and other information to measure adoption of APMs.
- Data collected by OHCA to measure APM adoption may include, but is not limited to, types of payment models, adoption by line of business, the number of members covered by APMs, the percent of budget dedicated to alternative payments, or cost and quality performance measures tied to the payment models.

### The APM Workstreams

### Develop Standards

Best practices for APMs and contracting guidance to promote equitable, high-quality, and cost-efficient care.

### **Define**

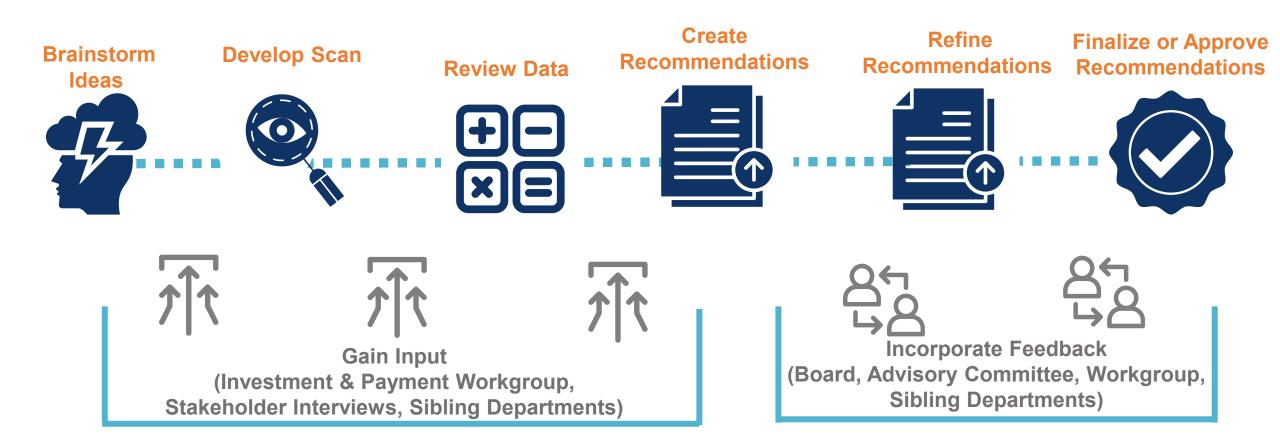

A framework and descriptions to identify what "counts" for each APM category.

# Set Goals for Adoption

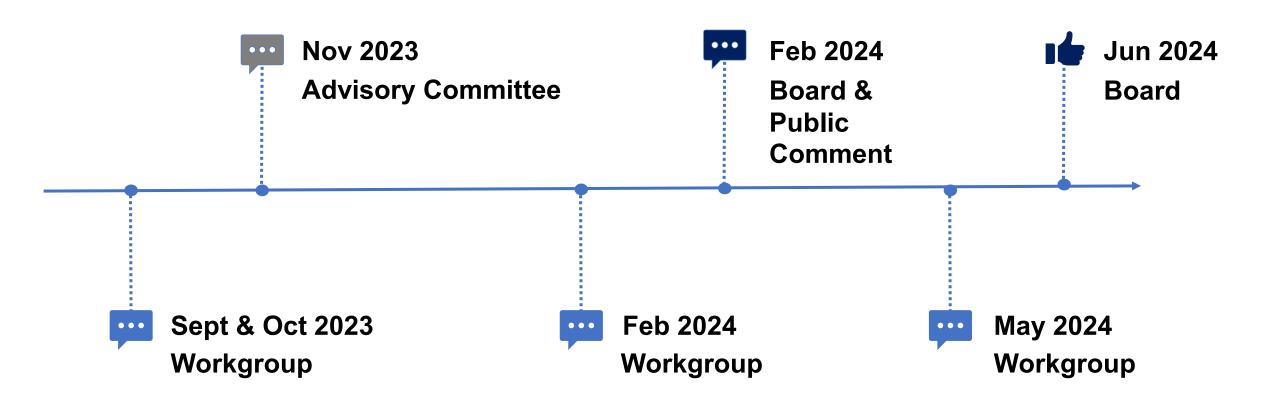

Targets to promote adoption of meaningful APMs and to promote equitable, high-quality, and cost-efficient care.

#### **Process for APM Workstreams**

#### **Timeline for APM Workstreams**

Between each meeting, OHCA and Freedman HealthCare will revise draft APM standards, definitions, and goals based on feedback.

## APM Standards Recommendations

## Standards for Alternative Payment Models

#### **Additional Statutory Guidance for Standards**

The standards for alternative payment models shall:

- Encourage and facilitate multi-payer participation and alignment
- Improve affordability, efficiency, equity, and quality by considering current best evidence for strategies such as quality-based or population-based payments
- Include minimum criteria for alternative payment models but be flexible enough to allow for innovation and evolution
- Align with the quality and equity measures used in the OHCA quality and equity measure set to the extent possible
- Address appropriate incentives to physicians and other providers and balancing measures, including total cost of care and quality, access, and equity to protect against perverse incentives and unintended consequences
- Attempt to reduce administrative burden by incorporating APMs that facilitate multi-payer participation and align with other state payers and programs or national models

# Approach to APM Standards and Implementation Guidance

#### Standards

- Best practices to approach contracting decisions that are common across APMs
- Strategic, not tactical or prescriptive not aiming to create an APM
- Grounded in evidence
- Not enforceable by OHCA

#### Implementation Guidance

- Technical assistance to supplement the standards
- Specific actions health care entities can take to meet the standard
- Examples of successful APM implementation related to the standard

### Vision of APM Standards Success

#### Stakeholders Endorse

 Health care entities, purchasers commit to use standards to inform future contracting

#### **Alignment Increases**

- APMs become more aligned
- Standardization makes participation easier
- Barriers to adoption decrease

#### **Performance Improves**

- Standards result in increased APM adoption
- Performance on measures of quality, equity, and affordability improve

## **Advisory Committee Feedback Incorporated**

- ✓ Specificity on improving affordability
- ✓ Detail on reducing patients' financial barriers for preventive services
- ✓ Emphasis on supporting a wide range of providers
- ✓ Addressing inequities in patient experience
- ✓ Technical assistance to support provider performance on metrics impacting payment

## **Draft APM Standards**

- 1. Use prospective, budget-based, and quality-linked payment models that improve health, affordability, and equity.
- 2. Implement payment models that improve affordability for consumers and purchasers.
- 3. Allocate spending upstream to primary care and other preventive services to create lasting improvements in health, access, equity, and affordability.
- 4. Be transparent with providers in all aspects of payment model design and terms including attribution and performance measurement.
- **5. Engage a wide range of providers** by offering payment models that appeal to entities with varying capabilities and appetites for risk, including small independent practices and historically under-resourced providers.

## **Draft APM Standards**

- **6. Collect demographic data**, including RELD-SOGI\* data, to enable stratifying performance.
- 7. Measure and stratify performance to improve population health and address inequities.
- 8. Invest in strategies to address inequities in access, patient experience, and outcomes.
- 9. Equip providers with accurate, actionable data to inform population health management and enable their success in the model.
- **10. Provide technical assistance** to support new entrants and other providers in successful APM adoption.

<sup>\*</sup>Race, ethnicity, language, disability status (RELD), sex, sexual orientation and gender identity (SOGI).

# APM Adoption Goal Recommendations

# Health Care Payment Learning and Action Network Framework

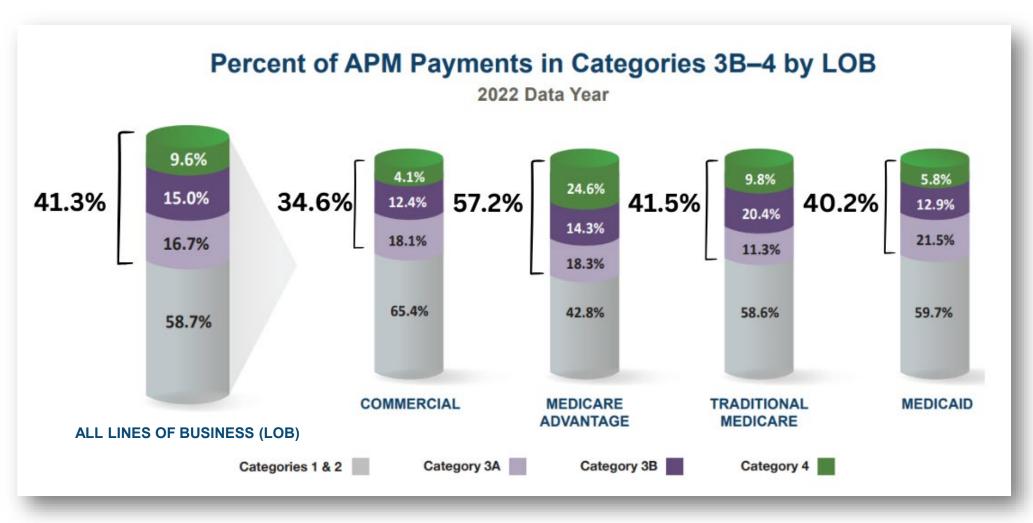

States, payers, and other stakeholders frequently use the HCP-LAN framework to measure APM adoption.

OHCA plans to collect data using the Expanded Framework for Non-Claims Payments (see appendix) and crosswalk to HCP-LAN.

Most APM adoption goals focus on Categories 3 and 4. Adoption is typically measured by the spend "flowing through" a contract with an APM, members attributed to APMs, or providers contracted under APMs.

Category 1	Category 2	Category 3	Category 4
FEE FOR SERVICE- NO LINK TO VALUE	FEE FOR SERVICE- LINK TO QUALITY & VALUE	APMS BUILT ON FEE- FOR-SERVICE ARCHITECTURE	POPULATION-BASED PAYMENT
	А	A	A
	Foundational Payments for Infrastructure & Operations	APMs with Shared Savings	Condition-Specific Population-Based Payment
	В	В	В
	Pay for Reporting	APMs with Shared Savings	Comprehensive Population-Based Payment
	С	and Downside Risk	С
	Pay-for-Performance		Integrated Finance & Delivery System
		3N Risk Based Payments NOT Linked to Quality	4N Capitated Payments NOT Linked to Quality

## **APM Adoption Nationally**

APM adoption nationally currently sits at 41% across HCP-LAN Categories 3 and 4.

Adoption was virtually flat across payer types from 2021 to 2022.

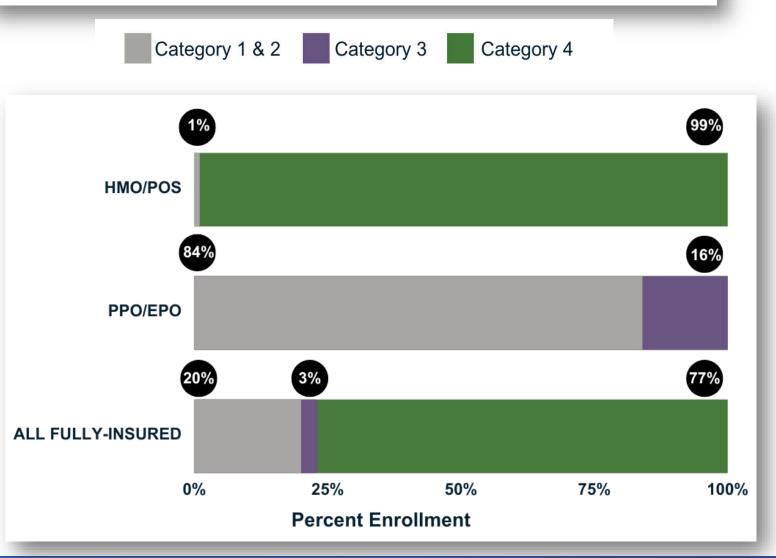

# Commercial APM Adoption in CA

APM adoption among the fully-insured population in California is more than 75 percent, far higher than commercial plans nationally. Adoption has been stable over the past five years.

The data are from IHA's Health Care Cost & Quality Atlas | IHA. These percentages are based on membership, but the percentages are similar whether using percent of members or percent of total dollars.

Based on informal conversations, OHCA anticipates most, but not all, of these APMs that would be considered "linked to quality."

## California's Fully-Insured Commercial Market 2021 Enrollment by HCP-LAN Risk Categories

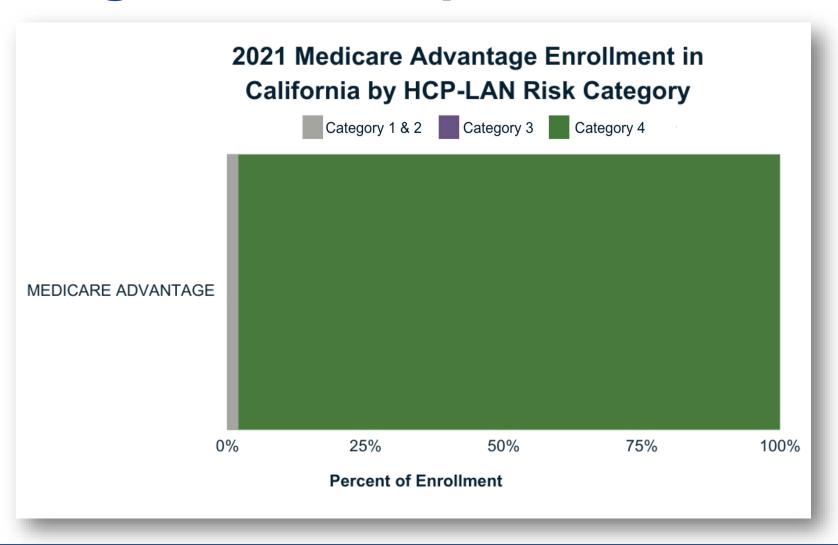

## Medicare Advantage APM Adoption in CA

In 2021, just under half of California Medicare beneficiaries participated in Traditional Medicare. The rest were enrolled in a Medicare Advantage plan.

Of those California Medicare Advantage beneficiaries, almost all were enrolled in a risk arrangement in 2021.

Like commercial, OHCA anticipates most, but not all, of these arrangements would be considered "linked to quality."

## Achieving APM Adoption Goals in Traditional Medicare

## Medicare Shared Savings Program

- Largest ACO initiative
- Permanent program
- Over 400k CA beneficiaries
- 2024 changes aim to increase enrollment, especially among new provider entrants

# Realizing Equity, Access and Community Health

- New program (2023-2026); replaces
   Direct Contracting
- Professional or global risk
- Focus on health equity, particularly in underserved communities
- 2024 changes aim to improve predictability, risk adjustment and further health equity

CMS Goal: 100% of Traditional Medicare and Medicare Advantage in APM (HCP-LAN 3b or 4) by 2030

# **Approach to APM Adoption Goal and Definitions**

#### **Definitions**

- Define what payment models "count" towards APM Adoption Goal
- Utilize Expanded Framework for Non-Claims Payments (see appendix) categories and definitions for data collection – aligned with other data collection efforts at OHCA and HCAI

#### **Adoption Goal**

- Promote shift from fee-for-service based payments to APMs
- Align financial incentives for equitable, high-quality, and cost-efficient care
- Progress towards Adoption Goal measured by OHCA, not enforceable
- Use Health Care Payment Learning and Action Network (HCP-LAN) framework to monitor progress toward goals
- Accountability through transparent public reporting

# Strategic Decisions for Monitoring Progress Toward APM Adoption Goal

- 1. Should only certain types of payment models count towards the APM adoption goal?
  - HCP-LAN Category 3A (shared savings only; no downside risk) and above?
  - HCP-LAN Category 3 (APMs built on a fee-for-service architecture) models meeting a minimum level of shared savings/risk?
  - APMs linked to quality?
- 2. Should goals vary by payer type (commercial, Medi-Cal, Medicare)? By product type (HMO, PPO)?
- 3. Should APM adoption goal be based on...?
  - % of total health care spending
  - % of members
  - % non-claims payments
  - % of providers
- 4. How should the goal be structured?
  - a series of stairstep goals
  - a single absolute goal
  - a relative improvement goal

Can be layered

# **Example from California's Neighbor to the North**

Oregon has made many of these same decisions in its designing of APM goals.

- Oregon limits the types of payment models that count towards the APM adoption goal.
- Oregon APM adoption goals do not vary by payer or product type.
- Oregon APM adoption goals are based on percent of total health care spending.
- Oregon includes a series of stairstep goals until 2025.

#### **Revised Oregon VBP Compact targets**

2021 2022 2023 2024 2025

Percent of payments that are shared savings (HCP-LAN 3A) and higher

Percent of payments to primary care practices and general acute care hospitals that are shared risk (HCP-LAN 3B) and higher

## **Monitoring Progress Toward APM Adoption Goal**

#### To count towards adoption goals, APMs must include:

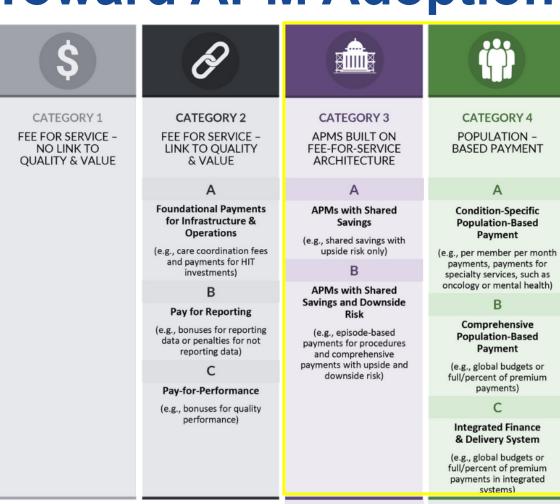

**Meaningful Risk Sharing**: OHCA recommends that Category 3A and 3B APMs should be required to meet a minimum threshold for shared savings or shared risk. This requirement ensures that APM arrangements built on a fee-for-service architecture have tangible financial incentives or penalties contingent upon the provider's attainment of predefined spending and quality benchmarks.

A Link to Quality: OHCA recommends defining payments as "linked to quality" if they involve potential for financial bonuses or penalties based on the provider's performance against predetermined quality benchmarks. This would exclude HCP-LAN Categories 3N and 4N (risk-based payments and capitation payments that are not linked to quality). This definition ensures that APM arrangements have a substantive connection between payments and quality outcomes.

## **Monitoring Progress Toward APM Adoption Goal**

The recommended APM Adoption Goal is based on the percent of members attributed to HCP-LAN Categories 3A, 3B, 4A, 4B, and 4C arrangements.

Only members enrolled in the highlighted payment arrangements count toward the goal.

3N Risk Based Payments

NOT Linked to Quality

HCAI
Department of Health Care

Capitated Payments NOT Linked to Quality

# Interim Milestones for Monitoring Progress towards APM Adoption Goal

# Recommended Interim Milestones toward 75% APM Adoption Goal for Percent of Members Attributed to HCP-LAN Categories 3 and 4 by Payer Type

	Commercial HMO	Commercial PPO	Medi-Cal	Medicare Advantage
2026	65%	35%	55%	55%
2028	70%	45%	60%	60%
2030	75%	55%	65%	65%
2032	75%	65%	70%	70%
2034	75%	75%	75%	75%

OHCA recommends using interim milestones in a stairstep structure to achieve the APM Adoption Goal by 2034.

This stairstep structure provides a path for each payer type to reach 75% percent of members attributed to HCP-LAN Categories 3 and 4 arrangements by 2034 while recognizing differences in starting places across payer types.

## **Draft APM Adoption Goal**

OHCA recommends an APM Adoption Goal of 75% of members attributed to Health Care Payment Learning and Action Network (HCP-LAN) Categories 3 and 4 arrangements across payer types (Commercial, Medi-Cal, and Medicare Advantage) by 2034.

## **Next Steps**

#### Now

- Board provides feedback on draft APM Standards and Adoption Goal
- OHCA solicits public comment on draft APM Standards and Adoption Goal

#### May 2024

- Investment and Payment Workgroup reviews Board and public comment feedback on draft APM Standards and Adoption Goal and discusses revisions
- OHCA revises draft APM Standards and Adoption Goal

#### **June 2024**

OHCA seeks Board adoption of APM Standards and Adoption Goal

## Public Comment

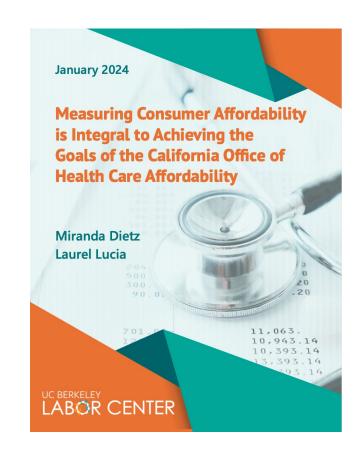

# Measuring Consumer Affordability

Vishaal Pegany

Miranda Dietz, Policy Research Specialist and Project Director for CalSIM Laurel Lucia, Director of the Health Care Program, UC Berkeley Labor Center

# Measuring Consumer Affordability

Miranda Dietz Laurel Lucia February 2024

# Measuring consumer affordability is integral to achieving OHCA's goals

Statute defines this as part of OHCA's charge:

Developing a comprehensive strategy for cost containment in California, including measuring progress towards reducing the rate of growth in per capita total health care spending and ultimately lowering consumer spending on premiums and out-of-pocket costs, while maintaining quality, access, and equity of care, as well as promoting workforce stability and maintaining high-quality health care jobs

§ 127500.5(o)

➤ Affordability measures should be part of the baseline annual report in 2025 and every report thereafter

# Consumer affordability has deteriorated over the last 20 years

# Premiums and deductibles have grown faster than wages and incomes

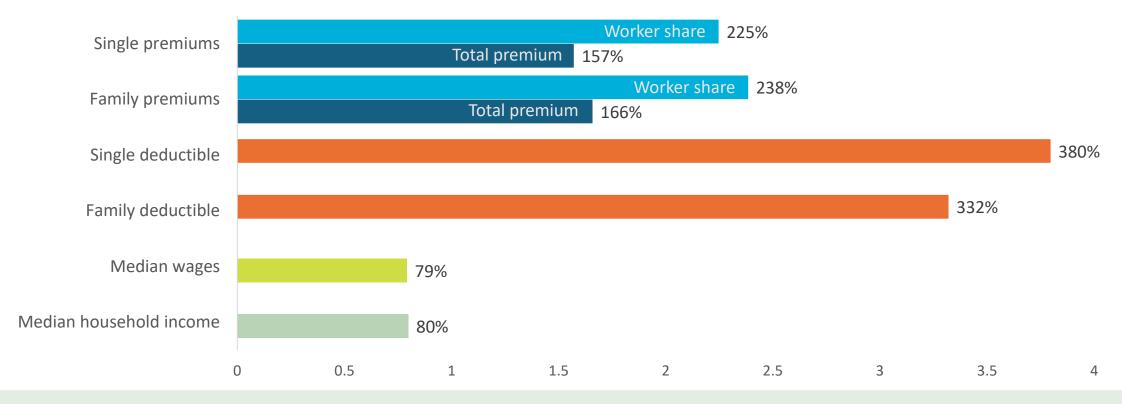

Average annual growth rates for premiums and deductibles for private-sector workers; median wages; and median household income in California, 2002-2022

# Faster growth in premiums and deductibles adds up over 20 years

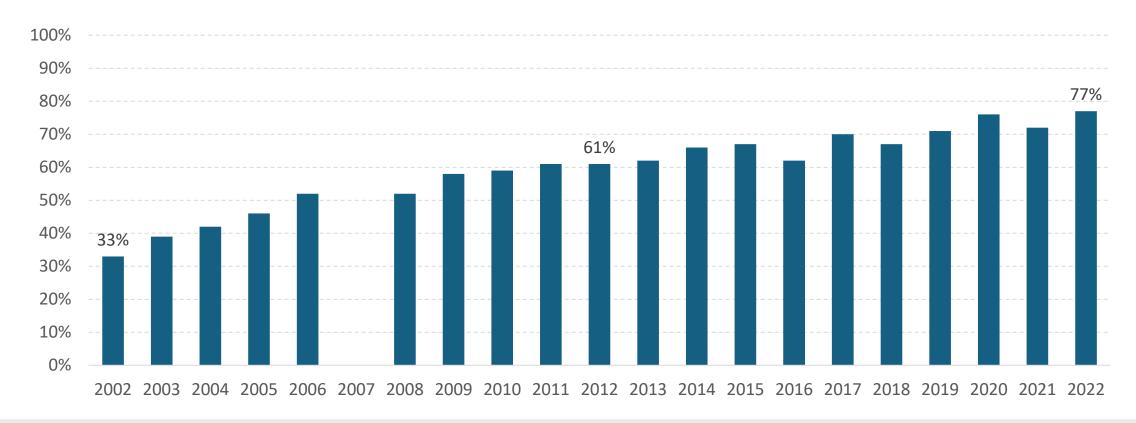

<u>Cumulative growth</u> for premiums and deductibles for private-sector workers; median wages; and median household income in California, 2002-2022

## Deductibles are increasingly common

Share of private-sector workers enrolled in coverage with deductibles in California, 2002-2022

# Health care takes up an increasing share of household budgets

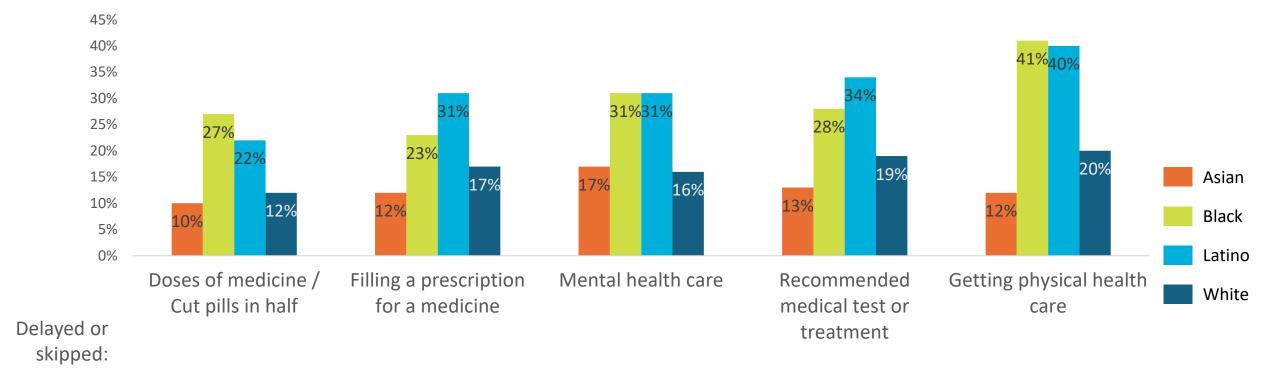

Typical private-sector family coverage premium and potential deductible spending as a share of median household

# High health care costs are a barrier to care; delays are most common for Latino and Black Californians

Share of California adults reporting that they or a family member skipped or delayed the following in the past 12 months due to cost, by race/ethnicity (2022)

# How OHCA can measure consumer affordability

# How will we know if OHCA is having an impact for California consumers?

OHCA should track multiple consumer affordability measures in the following categories:

#### Cost of coverage

- Premiums
- Offer rates
- Take up rates

#### Cost of accessing care

- Deductibles
- Copays
- Max out-of-pocket
- Actual out-of-pocket
- Actuarial value

## Health and financial consequences

- Skipped or delayed care
- Trouble paying medical bills
- Medical debt

Equity measures

## Administrative and survey data are needed

#### **Administrative data**

Can be used for year-over-year comparisons

- Department of Managed Health Care data for fullyinsured plans
- OHCA THCE data

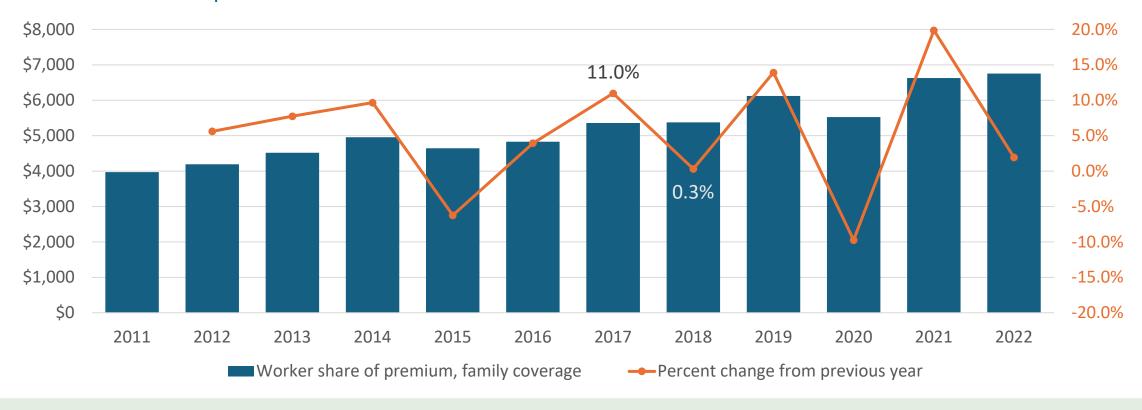

#### Survey data

- Track longer-term trends
- Useful for monitoring equity
- Only source currently for tracking health and financial consequences
  - Medical Expenditure Panel
     Survey-Insurance Component
  - CHCF Health Policy Survey
  - Others as needed

# Survey data can be volatile year-over-year but shows longer term trends

Average worker premium contribution for family coverage and percent change from previous year covered workers in private sector establishments in California 2011-2022

# Administrative data: Premiums and out-of-pocket costs

	2022-2023 Change	Source	
Premiums (average per member per month)			
Large group	+6.8%	DMHC	
Small group	+7.1%	DMHC	
Individual market	+5.6%	DMHC	
Consumer out-of-pocket spending (average per member per month)			
Commercial market	%	OHCA**	

<sup>\*\*</sup> OHCA data is not yet collected

### Administrative data: Actuarial value

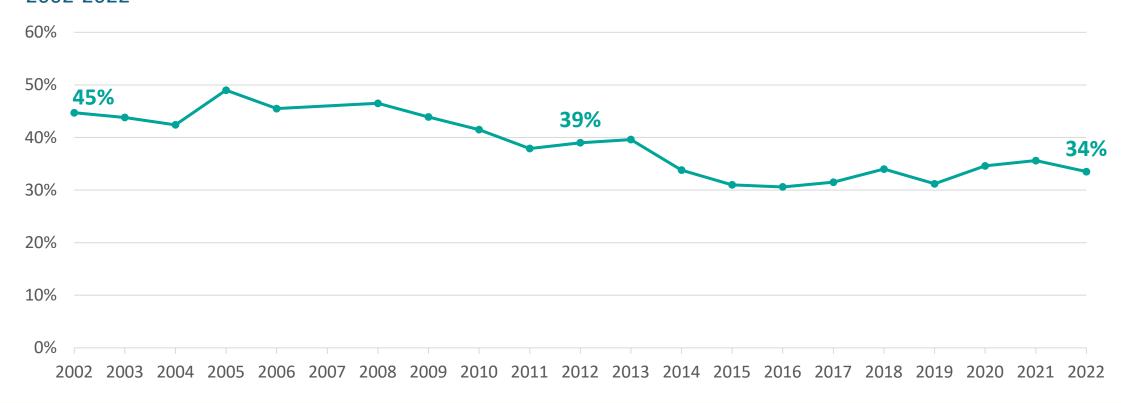

Actuarial value (average share of medical expenses that the plan will pay) by market

### Survey data: cost of coverage Offer rate among small businesses has declined

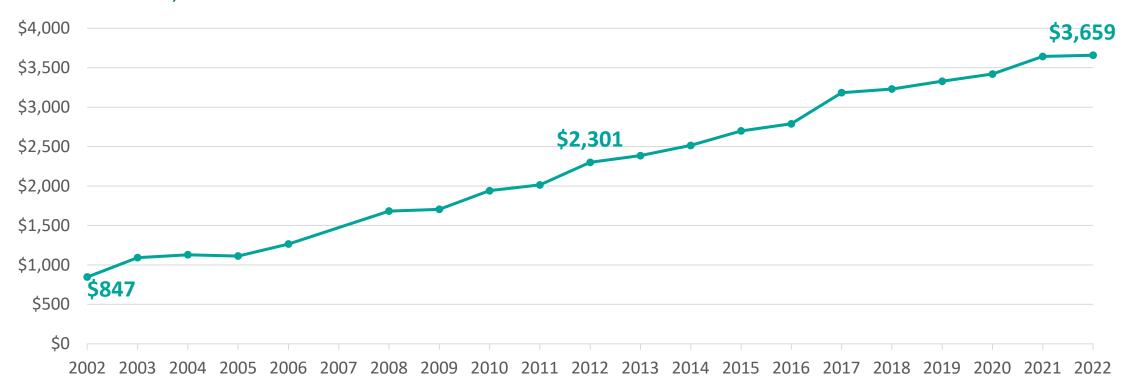

Share of California private-sector establishments with fewer than 50 employees that offer health insurance, 2002-2022

# Survey data: cost of care Family deductible amounts have increased

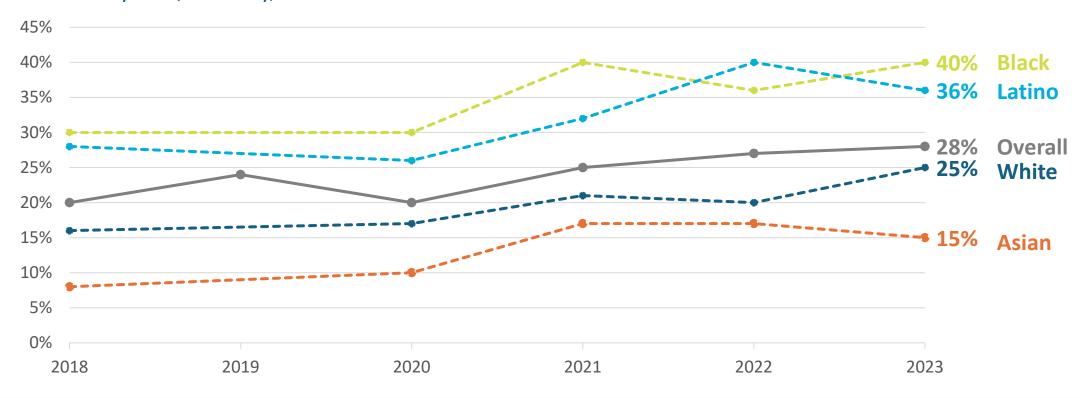

Average family deductible (among family plans with a deductible) for enrollees at California private-sector establishments, 2002 to 2022

### Survey data: health and financial consequences Black and Latino Californians are more likely to report trouble paying for medical bills

Share of California adults who say they or anyone in their family had trouble paying any medical bills in the past 12 months by race/ethnicity, 2018-2023

### Proposed consumer affordability measures

#### Health and Financial Cost of coverage Cost of accessing care Consequences ★ Total premium ✓ Consumer responsibility portion **Administrative** of total health care data for annual expenditures assessment ✓ Actuarial value **Survey** data for ☑ Deductible ✓ Skipping / delaying care due to ✓ Offer rate by firm size ✓ Maximum out-of-pocket cost longer-term **▼** Take up rate among eligible monitoring ✓ Prevalence of medical debt workers visits Survey data for ☐ Premium by race/ethnicity and □ Deductible by race/ethnicity ✓ All of the above by equity impacts race/ethnicity and income income and income

### Other data needs

- As OHCA gains experience monitoring trends, other data needs will likely arise
- Data to explore include:
  - Premium and deductible data by race/ethnicity and income
  - Geographic variation
  - New possibilities for measures using the Health Payments Database

## Public Comment

## Measuring Out-of-Plan Spend

Vishaal Pegany

CJ Howard

KeriAnn La Spina, Senior Health Researcher, Mathematica

### **Definitions**

#### **Cost sharing**

Member's financial responsibility including copay, coinsurance, and deductibles

Included in OHCA THCE

#### **Out-of-plan spending**

Costs for services not covered by insurance & costs paid outside insurance

Not included in OHCA THCE

Total out-of-pocket spending\*

## Why Measure Out-of-Plan Spending?

- The Board and Advisory raised concerns that OHCA's Total Health Care Expenditures (THCE) measure does not include out-of-plan spending.
- Some possible reasons out-of-plan spending include:
  - o Provider Preferences for Cash Payments: Recent research suggests that a growing portion of behavioral health providers do not accept insurance, and that fewer psychiatrists accept insurance compared to other specialties.
  - o Barriers to Accessing Providers/Convenience: Many patients struggle to find in-network providers, especially behavioral health providers, due in part to provider and prescriber shortages and delays in getting appointments.
  - Changes in Benefit Design: Changes in benefit design and covered services could compel more patients to seek out-of-plan care.
- Fewer providers accepting insurance reduces access to care for those unable/unwilling to self-pay and may introduce inequities in access to and quality of care.
- To shed light on the scope of this problem and its implications for potential public policy, OHCA proposes a supplemental analysis to estimate out-of-plan spending,

# Estimating Out-of-Plan Spending Using the Medical Expenditure Panel Survey

- The Medical Expenditure Panel Survey Household Component (MEPS-HC) is a nationally representative sample of the civilian noninstitutionalized population
- It includes information from consumers on health insurance coverage and healthcare utilization and costs, including out-of-pocket spending:
  - Spending in the MEPS-HC is defined for each medical event (office visit, inpatient stay, outpatient visit, etc.)
  - For each event, data shows spending by private insurance, public programs, and self-pay (out-of-pocket)
  - o Each event includes type of provider, diagnosis codes, and procedure codes
- Allows for the generation of California-specific estimates, but may need to pool years to produce reliable results
- MEPS-HC out-of-pocket spending variable includes but does not differentiate payment for outof-plan events
- OHCA will build decision rules to estimate the portion of MEPS out-of-pocket spending allocated to out-of-plan events
- OHCA is developing a methodology to estimate out-of-plan spending based on payment source and timing of medical events in MEPS-HC data.

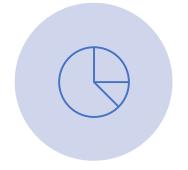

# **Example of Analysis: MEPS-HC and Behavioral Health Spending**

#### What can we measure?

- MEPS-HC can be used to estimate:
  - Out-of-plan spending for behavioral health services,
  - Out-of-plan spending for other service types
  - Out-of-plan spending as a percentage of total behavioral health spending
- The types of research questions we aim to answer:

What is the level and change in out-of-plan spending for behavioral health services over time in California?

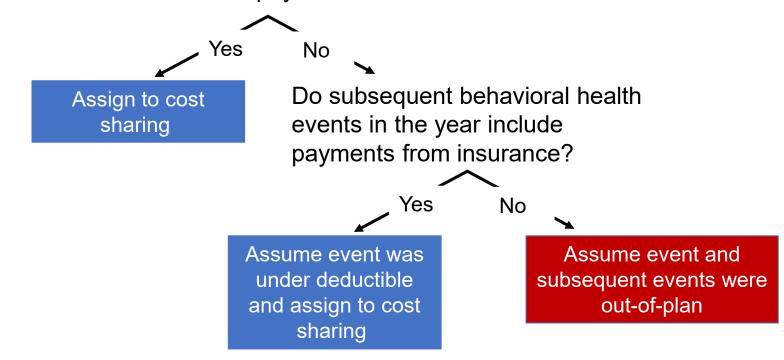

How much are Californians spending out-of-plan on behavioral health conditions compared with other types of services?

### **How Can We Estimate These Costs?**

#### Example: Estimating out-of-plan behavioral health spending

MEPS variable: Out-of-pocket spending on behavioral health service; first annual event

Does the event include payments from insurance?

# Timeline for Measuring Out-of-Plan Spending

#### Spring 2024

Develop method to estimate out-ofplan spending Run analyses using national 1996-2021 MEPS-HC data

#### Fall 2024

Acquire MEPS-HC 1996-2022 data Run CA-specific analysis

#### Winter 2024

Present preliminary out-of-plan findings to the Board

#### **Summer 2025**

Acquire MEPS-HC 1996-2023 data Update out-of-plan analysis

#### **Fall 2025**

Release supplemental report on out-ofplan spending

Baseline report is released in June 2025

### Growing Out-of-Pocket Costs in the U.S.

- Out-of-pocket spending in the U.S. has increased substantially over the past 42 years
  - It "increased by 6.6% to \$471.4 billion in 2022, or 11% of total national health expenditure (NHE)" (NHE Fact Sheet)\*
  - Cost-sharing, as presented by increasing deductibles for covered workers, has also increased since 2006, from \$303 to \$1,568 (KFF Employer Health Benefits Survey)
- Out-of-pocket costs are mainly driven by durable medical equipment, outpatient services, dental services, long-term services and support, and prescription drugs (U.S. Health Care Coverage and Spending)

Per capita out-of-pocket expenditures, 1970-2022

Note: A constant dollar is an inflation adjusted value used to compare dollar values from one period to another.

6	Pharmacy Rebates		

	Non-claims-based		Corresponding
#	Payment Categories		HCP-LAN
	and Subcategories		Category
3.	Shared Savings Payments and Recoupments	Non-claims payments to healthcare providers or organizations (or recouped from healthcare providers or organizations) based on performance relative to a defined spending target. Shared savings payments and recoupments can be associated with different types of budgets, including but not limited to episode of care and total cost of care. Dollars reported in this category should reflect only the non-claims shared savings payment or recoupment, not the fee-for-service component. Recouped dollars should be reported as a negative value. Payments in this category are considered "linked to quality" if the shared savings payment or any other component of the provider's payment was adjusted based on specific predefined goals for quality. For example, if the provider received a performance payment in recognition of quality performance in addition to the shared savings payment, then the shared savings payment would be considered "linked to quality."	
		Non-claims payments to healthcare providers or organizations for a procedure-based episode (e.g., joint	3A
	Procedure-related,	replacement). Under these payments, a provider may earn shared savings based on performance relative to a	
	episode-based	defined spending target for the episode. Under this type of payment, there is no risk of the payer recouping a portion	
a.	payments with shared	of the initial fee-for-service payment if the defined spending target is not met. Payment models in this subcategory	
	savings	should be based on a fee-for-service architecture. Payment models paid predominantly via capitation should be	
		classified under the appropriate "Capitation and Full Risk Payment" subcategory.	

#	Non-claims- based Payment Categories and Subcategories	Definition	Corresponding HCP-LAN Category
b.	Procedure- related, episode- based payments with risk of recoupments	Non-claims payments to healthcare providers or organizations (or recouped from healthcare providers or organizations) for a procedure-based episode (e.g., joint replacement). Under these payments, a provider may earn shared savings based on performance relative to a defined spending target for the episode. If the defined spending target is not met, the payer may recoup a portion of the initial fee-for-service payment. Payment models in this subcategory should be based on a fee-for-service architecture. Payment models paid predominantly via capitation should be classified under the appropriate "Capitation and Full Risk Payment" subcategory.	3B
C.	Condition-related, episode-based payments with shared savings	Non-claims payments to healthcare providers or organizations for a condition-based episode (e.g., diabetes). Under these payments, a provider may earn shared savings based on performance relative to a defined spending target for the episode. Under this type of payment, there is no risk of the payer recouping a portion of the initial fee-for-service payment if the defined spending target is not met. Payment models in this subcategory should be based on a fee-for-service architecture. Payment models paid predominantly via capitation should be classified under the appropriate "Capitation and Full Risk Payment" subcategory.	3A
d.	Condition-related, episode-based payments with risk of recoupments	Non-claims payments to healthcare providers or organizations (or recouped from healthcare providers or organizations) for a condition-based episode (e.g., diabetes). Under these payments, a provider may earn shared savings based on performance relative to a defined spending target for the episode. If the defined spending target is not met, the payer may recoup a portion of the initial fee-for-service payment. Payment models in this subcategory should be based on a fee-for-service architecture. Payment models paid predominantly via capitation should be classified under the appropriate "Capitation and Full Risk Payment" subcategory.	

#	Non-claims-based Payment Categories		Corresponding HCP-LAN
	and Subcategories		Category
e.	Risk for total cost of care (e.g., ACO) with shared savings	Payment models in which the provider may earn a non-claims payment, often referred to as shared savings, based on performance relative to a defined total cost of care spending target. Under this type of payment, there is no risk of the payer recouping a portion of the initial fee-for-service payment if the defined spending target is not met. Payment models in this subcategory should be based on a fee-for-service architecture. Payment models paid predominantly via capitation should be classified under the appropriate "Capitation and Full Risk Payment" subcategory. These models must offer providers a minimum of 40% shared savings if quality performance and other terms are met. Models offering a lessor percentage of shared savings are classified as "Performance Payments." Providers that would be classified by CMS as "low revenue" may be eligible for shared savings at a lower rate of 20% if they do not meet minimum savings requirements.	3A
f	Risk for total cost of care (e.g., ACO) with risk of recoupments	, , , , , , , , , , , , , , , , , , , ,	3B

#	Non-claims- based Payment Categories and Subcategories	Definition	Corresponding HCP-LAN Category
4	Capitation and Full Risk Payments	Per capita, non-claims payments paid to healthcare providers or organizations to provide a defined set of services to a designated population of patients over a defined period of time. Payments in this category are considered "linked to quality" if the capitation payment or any other component of the provider's payment was adjusted based on specific, pre-defined goals for quality. For example, if the provider received a performance payment in recognition of quality performance in addition to the capitation payment, then the capitation payment would be considered "linked to quality."	
a.	Capitation	Per capita, non-claims payments paid to healthcare organizations or providers to provide primary care services to a designated patient population over a defined period of time. Services are restricted to primary care services performed by primary care teams.	4A
b.	Professional Capitation	Per capita, non-claims payments paid to healthcare organizations or providers to provide professional services to a designated patient population over a defined period of time. Services typically include primary care clinician, specialty care physician services, and other professional and ancillary services.	4A
C.	IEACIIIIV Canifation	Per capita, non-claims payments paid to healthcare organizations or providers to provide inpatient and outpatient facility services to a designated patient population over a defined period of time.	4A
d.		Per capita, non-claims payments paid to healthcare organizations or providers to provide behavioral health services to a designated patient population over a defined period of time. May include professional, facility, and/or residential services.	4A
e.	Global Capitation	Per capita, non-claims payments paid to healthcare organizations or providers to provide comprehensive set of services to a designated patient population over a defined period of time. Services typically include primary care, specialty care, other professional and ancillary, inpatient hospital, and outpatient hospital at a minimum. Certain services such as behavioral health or pharmacy may be carved out.	4B

#	Non-claims-based Payment Categories and Subcategories	Definition	Corresponding HCP-LAN Category
f.	Payments to Integrated, Comprehensive Payment and Delivery Systems	provide a comprehensive set of services to a designated patient population over a defined period of time. Services typically include primary care, specialty care, other professional and ancillary, inpatient hospital and outpatient hospital at a minimum. Certain services such as behavioral health or pharmacy may be carved out. This category differs from the global capitation category because the provider organization and the payer organization are a single, integrated entity.	4C
5	Other Non-Claims Payments	Any other payments to a healthcare provider or organization not made on the basis of a claim for health care benefits and/or services that cannot be properly classified elsewhere. This may include retroactive denials, overpayments, and payments made as the result of an audit. It also includes governmental payer grants and shortfall payments to providers (e.g., Disproportionate Share Hospital payments and FQHC wraparound payments).	
6	Pharmacy Rebates	Payments, regardless of how categorized, paid by the pharmaceutical manufacturer or pharmacy benefits manager (PBM) to a payer or fully integrated delivery system.
